

Brian Hechinger

DEVOPS ARCHITECT/SYSTEMS PROGRAMMER

☎ +351 912 778 777 | ✉ brian@4amlunch.net | 🌐 bhechinger | 📄 bhechinger

DevOps Architect/Systems Programmer with 30+ years of experience building redundant, performant environments. Proponent of “configuration as code” and fully automated systems when at all possible.

Skills Summary

Operating Systems	Linux, FreeBSD, OpenBSD, Solaris, AIX, Windows
Virtualization	VMware, KVM, Xen, vBox, Solaris Zones
Cloud	AWS, Digital Ocean, Linode, GCP
Programming	C, D, Go, Python, BASH, Java, PL/pgSQL, Rust
Configuration	Terraform, Puppet, Ansible, Chef
Data Systems	MySQL, Oracle, PostgreSQL, Vertica, Redis, RabbitMQ, Hadoop
Containers	Kubernetes, Helm, Kustomize, Docker, Podman, ArgoCD

Professional Experience

Gevulot

Portugal (remote)

TOOLING & SOLUTIONS ENGINEER (GO/RUST)

Mar. 2024 - Present

- Developed Kubernetes Operators in Rust to deploy and manage IPFS, Aztec, Canton, Firestarter and Zenith services.
- Built and maintained GCP infrastructure, including GKE and Cloud SQL, to support platform services.
- Developed internal CLI tools to automate service management and operational workflows.
- Designed and implemented reusable SP1 prover integration and development tooling, then built most of the end-to-end Taiko/Raiko execution pipeline, identifying and isolating the remaining NanoVMs runtime incompatibility.

Payrails (contract)

Portugal (remote)

SENIOR BACKEND DEVELOPER

Aug. 2023 - Mar. 2024

- Developed applications, services and Kubernetes Operators in Rust and Go.
- Built Helm charts and managed testing and CI/CD pipelines for reliable, scalable deployments.
- Collaborated with cross-functional, distributed teams to align development with business goals and improve engineering practices.

Nitrado (contract)

Portugal (remote)

SITE RELIABILITY ENGINEER/SENIOR DEVOPS ENGINEER

Sep. 2023 - Jan. 2024

- Deployed and managed game servers and application stacks on Kubernetes using Ansible roles.
- Built Molecule tests for Ansible roles, improving infrastructure reliability and maintainability while automating operations.
- Managed highly available Kubernetes clusters, troubleshooting gaming workloads and delivering client-focused solutions with cross-functional remote teams.

Ardan Labs

Miami, FL (remote)

SENIOR GO ENGINEER

Dec. 2020 - Present

- Developing applications in Go.
- Performing automated testing on Go applications.
- Building and deploying apps and containers in Kubernetes using Helm charts, Kustomize and ArgoCD.
- Advising customers regarding best practice.
- Wrote code that interfaces with SQL and NoSQL databases, including: Oracle, PostgreSQL, MySQL, Couchbase and MongoDB.

Cloudearch

Atlanta, GA (remote)

DEVOPS ENGINEER

Apr. 2018 - Dec. 2020

- Managing AWS and GCP infrastructure using Terraform and Packer.
- Managing server configuration with Chef and Ansible.
- Writing Lambda functions and CI/CD pipelines.
- Advising customers regarding best practices.
- Building and deploying apps and containers in ECS and Kubernetes.
- Writing software in Python and Go.
- Managed and write client software for Oracle.

Endotronix

SENIOR DEVOPS ENGINEER

Lisle, IL (remote)

Jun. 2017 - Apr. 2018

- Managed AWS infrastructure using Terraform and Packer.
- Managed server configuration with Chef Automate.
- Ensured secure system configuration with Chef Compliance.
- Started re-writing the API back-end in Go to be run as Lambda functions.
- Created CI/CD pipelines using GitLab-CI and Chef Automate.

Cisco Systems

SENIOR DEVOPS ARCHITECT/SYSTEMS PROGRAMMER

Alpharetta, GA

Sep. 2015 - Apr. 2017

- Managed all aspects of the Security Engineering Lab Infrastructure: Hardware (Dell, HP, UCS; 300+), Virtualization (VMware, KVM; 1500+), OS (Debian) and Networking (IOS, Nexus), JIRA, Confluence, BitBucket (Stash).
- Wrote and maintained automated appliance deployment system using Python, Flask-RESTful, pyvmomi, libvirt, pycimc and RabbitMQ for our Engineers to be able to quickly deploy test systems turning a 4+ hour chore for them into a 15 second command line task.
- Managed AWS EC2, S3 and RDS instances via web and API.
- Managed docker for the new build system as well as the new appliance design.

Damballa

SENIOR DEVOPS ARCHITECT

Atlanta, GA

Feb. 2015 - Sep. 2015

- Designed and implemented better management of the production services using Puppet.
- Managed three Cloudera Hadoop clusters.
- Wrote custom Web Hook API server to interface with Envoy.
- Wrote custom disk space usage trending for the Hadoop clusters to predict when to purchase additional hardware.
- Managed AWS EC2, S3 and RDS instances via web and API.
- Managed Tomcat as well as deployed applications to it.

CardioMEMS

SENIOR DEVOPS ENGINEER

Atlanta, GA

Jun. 2014 - Feb. 2015

- Continued as a consultant from February 2015 until September 2016.
- Managed all aspects of UNIX systems with the assistance of Puppet and FreeIPA.
- Wrote custom Puppet modules to manage the proper configuration of all pieces of the application stack.
- Maintained on premise services such as GitLab, Puppet and FreeIPA.
- Wrote custom in-house tools in Python to manage aspects of the environment not handled by Puppet.

NICE Systems

SENIOR LINUX ENGINEER

Alpharetta, GA

Jun. 2013 - Jun. 2014

- Managed KVM/RHEV hosts and the 600+ VMs that ran on them.
- Managed MySQL, Tomcat, Vertica and Oracle.
- Wrote Ansible playbooks and Python code to help automate app deployment to Tomcat.
- Managed Tomcat services.
- Management of all server and network hardware (Dell, Cisco).
- Managed various apps: JIRA, Stash, Confluence, Crowd.

NWN Corporation

SENIOR SOLUTIONS ENGINEER

Mount Laurel, NJ

Nov. 2010 - Jun. 2013

- Designed network, storage and virtualization environments for clients.
- Implemented designs for clients.
- Supported legacy and new client environments.

Thomas Jefferson University

SYSTEM ARCHITECT/PROGRAMMER

Philadelphia, PA

Jun. 2006 - Jun. 2010

- Architected many systems including the CommVault backup system, storage and networking.
- Maintained many systems including email, custom in-house IDM system, LDAP, storage and networking.
- Authored software to propagate IDM changes out to remote systems (Email, NT Domain, etc).
- Authored a user self-service portal to allow users to automatically handle certain tasks without administrator involvement.
- Architecture and implementation of the new VMware vCenter cluster and the migrations of all VMs into it.
- Planning and execution of a datacenter move.
- Wrote software to help manage systems (email, LDAP, firewall rules, etc).
- Built automated system to build RPM packages to be distributed to deploy all our in-house software and the YUM repo to house it all.

Verizon Data Systems

UNIX SUPPORT ENGINEER

Tampa, FL

Jun. 2005 - Jun. 2006

- Monitored and provided first line support for applications written to support data rollout services.
- Wrote a number of tools to assist team members in being able to more effectively do their jobs.
